

Al-Maarif University College Department of Nursing Medical Terminology

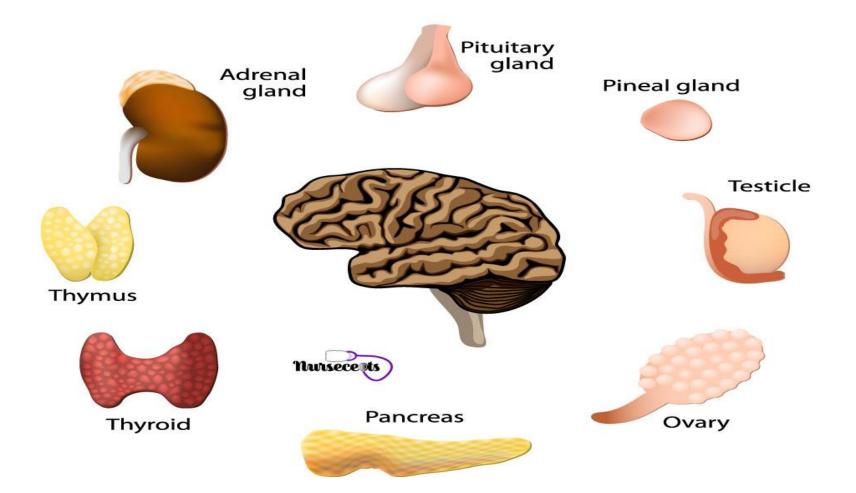

Stage -1Medical Terms of the Endocrine System
Lec. 6

Assit.Lacturer Abdulrahman 2024

1

Word Root and Combining Vowel for the Endocrine System

ENDOCRINE SYSTEM

	Term	Meaning	Term	Meaning
3	Aden/o	Gland	Pancreat/o	pancreas
	Adren/o	adrenal gland	Parathyroid/o Parathyro-	parathyroid gland
	Adrenal/o	adrenal gland	Pituitar/o	pituitary gland
	Corti-	cortex	Thym/o	thymus gland
	Gluc/o, Glyc/o, Glycos/o	glucose, sugar	Thyroid/o	thyroid gland
			Ovari/o,	ovary

Endocrine Specialties

Term	Definition/Meaning		
Endocrinology	Endo means within or inward. Crine means endocrine secretionology is the study of. Endocrinology is a medical specialty that treats conditions related to the endocrine system.		
Endocrinologist	Endo means within or inward. Crine means endocrine secretion. -logist means one who studies. An endocrinologist is a person who treats conditions related to the endocrine system.		

The Structure and Functions of the Endocrine System

Glands are where hormones are produced and secreted into the blood Glucagon is synthesized and released from pancreatic alpha cell blood glucose, protein ingestion, and exercise. Growth The growth hormone affects the growth and development of	lls in response to low levels of
blood glucose, protein ingestion, and exercise. Growth The growth hormone affects the growth and development of	•
	skeletal muscle in long bones,
hormone affecting a person's size and height.	
Homeostasis -stasis means standing still. Homeostasis means having a consistent internal environment in the	e body.
Parathyroid glands Parathyroid/o means parathyroid gland. Glands are where hormones are produced and secreted into the bloom The parathyroid glands are small and oval-shaped that regulate the are usually four glands.	
Pineal gland Pineal refers to the pineal gland. The pineal gland is located near the center of the brain. It is melatonin.	composed of cells that secrete

Medical Term	Definition 8
Thyroid gland	Thyroid means thyroid gland. The thyroid gland is located in front of the trachea. It is a highly vascular organ and controls metabolic processes throughout the body.
Negative feedback	Negative feedback is when a gland responds to a stimulus by increasing or decreasing the secretion of a hormone based on feedback from different factors.
Insulin	Insulin is produced by beta cells and is the principal regulator of metabolism. Insulin facilitates glucose transport across cell membranes in most tissues.
Cortisol	Cortisol is the most abundant and potent glucocorticoid. It is necessary to maintain life. One major function of cortisol is the regulation of blood glucose concentration.
Ovaries	Ovaries produce and store eggs in females. Also, the ovaries produce estrogen.
Testes	Teste- refers to testicles. The testes produce and store sperm in males. The testes also produce testosterone.
Pancreas	The pancreas is an accessory organ of the digestive system. It produces and secretes digestive enzymes that help to break down starches, fats, and proteins and also, produces hormones that regulate blood sugar.

Term	Definition/Meaning	
Adrenal glands	Adrenal means pertaining to the adrenal gland. Glands are where hormones are produced and secreted into the bloodstream. The adrenal glands are small glands located on the upper portion of each kidney. The Adrenal glands are endocrine glands that secrete such hormones as catecholamine's norepinephrine, epinephrine, dopamine and corticosteroids.	
Aldosterone	Aldosterone is a mineralocorticoid steroid hormone that maintains extracellular fluid volume.	
Corticosteroid	Corti- means cortex. A corticosteroid is any hormone synthesized by the adrenal cortex except androgen.	
Endocrine system	Endo means within or inward. Crine means endocrine secretion. The endocrine system consists of a series of organs and glands throughout the body that produce, store, and secrete special chemical messengers.	

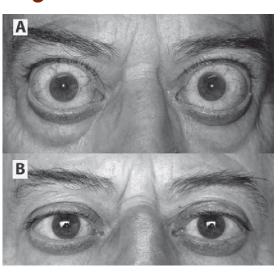

Diseases and Disorders of the Endocrine System

Term	Definition/Meaning
Acromegaly	Acro- means extremities. Megaly- means great. Acromegaly is characterized by an overgrowth of the bones and soft tissue.
Diabetic nephropathy	Diabetic nephropathy is damaged to the small blood vessels that supply the glomeruli of the kidney.
Diabetic neuropathy	Diabetic neuropathy is nerve damage normally associated with diabetes mellitus.
Goiter	A goiter is an enlargement of the thyroid gland caused by excess secretion of the thyroid-stimulating hormone (TSH).
Grave's disease	Grave's disease is an autoimmune disease of excessive thyroid hormone secretion.

Medical Term	Definition/Meaning
Hyperthyroidism	Hyper- means excessive. Thyroid means thyroid glandism refers to a condition process, theory of, principle, method. Hyperthyroidism is an increased activity of the thyroid gland and a constant increase in synthesis and release of thyroid hormones.
Hypoparathyroidism	Hypo- means insufficient. Para- means similar or beside. Parathyroid/o means parathyroid glandism refers to a condition process, theory of, principle, method. Hypoparathyroidism is due to an inadequate amount of circulating parathyroid hormone.

Term	Definition/Meaning
Hypopituitarism	Hypo- means insufficientism refers to a condition process, theory of, principle, method. Hypopituitarism involves a decrease in one or more of the pituitary hormones.
Hypothyroidism	Hypo- means insufficient. Thyroid means thyroid glandism refers to a condition process, theory of, principle, method. Hypothyroidism results from insufficient circulating thyroid hormone.
Myxedema	Myx-means relating to mucus. Myxedema is a severe form of hypothyroidism due to an accumulation of mucopolysaccharides in the dermis of the tissue. It is characterized by swelling of the face, hand, feet, and periorbital tissue.

	Term	Definition/Meaning
14	Thyroiditis	Thyroid means pertaining to the thyroid gland. -itis means inflammation. Thyroiditis is an inflammatory process in the thyroid.
	Thyrotoxicosis	Thyr/o means pertaining to the thyroid gland. Toxic refers to poison. -osis refers to a condition, status process Thyrotoxicosis is the physiological effect of hypermetabolism that results from excess circulating levels of T4, T3 or both.
	Thyrotoxic crisis	Thyr/o means pertaining to the thyroid gland. Toxic refers to poison. Thyrotoxic crisis is also known as a thyroid storm. It is an acute condition in which all hyperthyroid manifestations are heightened.

Thank You & Good Luck
